

April 2022 – Important Information about your Drinking Water (Updated December 2022):

As required by the New Jersey Department of Environmental Protection (NJDEP), we are providing this update. The test result received for samples collected on October 20, 2022 for PFOA at the Beverly Road Water Treatment Plant was 15 parts per trillion (PPT) with our Running Annual Average (RAA) now at 14 ppt. Since exceeding the RAA Maximum Contaminant Level (MCL) of 14 ppt. for PFOA with the 1<sup>st</sup> quarter 2022 result, the RAA for PFOA at the Beverly Road Plant has remained consistent and has not exceeded the MCL established by the NJDEP. The Township's Engineering Consultant, T&M Associates, is currently preparing plans and specifications for an ion exchange treatment system that will bring the plant back into full compliance. Additional updates will be posted quarterly. For more information, please contact Scott Hatfield, Township Engineer at 609-239-5836 or [shatfield@twp.burlington.nj.us](mailto:shatfield@twp.burlington.nj.us).
